Please substitute the following paragraph for the paragraph of lines 1 – 11 on page 121.

-- The compound (0.5 g) obtained in Example ~~11a~~ 12a) was dissolved in DMF (1.0 mL), methyl iodide (0.13 mL) was added thereto at room temperature, and the mixture was mixed at 80°C overnight. The reaction solution was poured into water and extracted with a mixed solution of chloroform and methanol, and the extract was dried over anhydrous magnesium sulfate. The solvent was distilled off, and the residue was purified with a basic silica gel column. The product was treated with a solution of hydrogen chloride in ether (5 mL) to give the title compound (0.23 g) as white crystals. --
